PRIMUS
Shining Brighter, Together!

Decodrops
WET LOCATION / OUTDOOR / INDOOR LIGHTING

The demand for open air-spaces is significantly increasing as the indoor-outdoor living boundaries are blurred. Lighting in an outdoor environment must be pleasing in its day form, but more importantly, by night it must present a safe, welcoming, and creative ambiance inviting pedestrian circulation and gathering. For over two decades Primus' Decostring has been the recognized industry standard for US made, ETL listed, wet location, specification grade, permanently mounted linear suspended festoon string lighting.
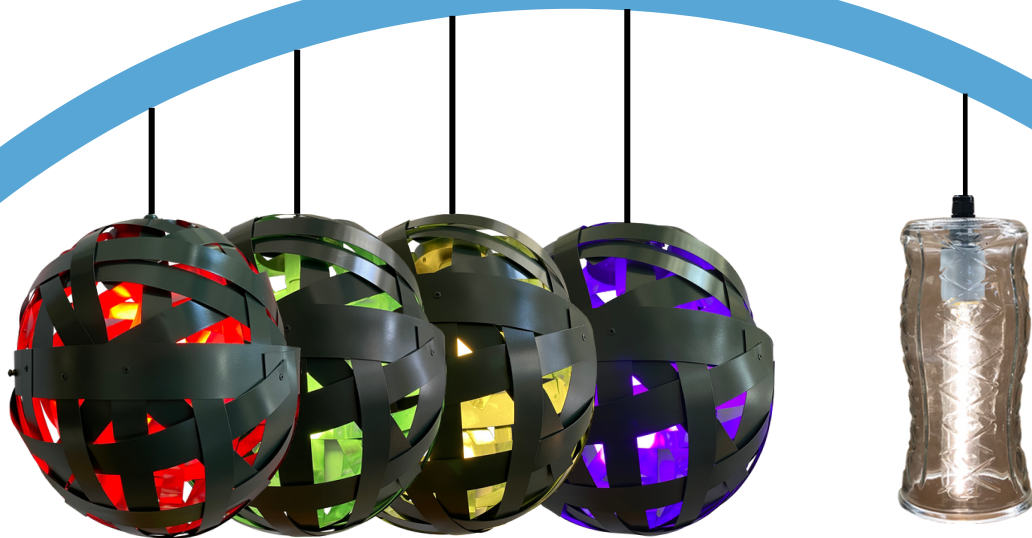

Launching our Decodrop series builds on the features of Decostring, including a wider range of shade options, but in a monopoint, vertical drop decorative pendant. The Decodrops are appropriate for indoor applications but the exclusive benefit is that they are **designed to withstand the outdoor elements**. Decodrops are a perfect solution for open air structures like pergolas, trellises, trees, and canopies subject to direct exposure. When clustered in large trees, Decodrops bring a sense of awe as the curiosity of pedestrians is struck with the character of these lights.
