

INSTALLATION INSTRUCTIONS

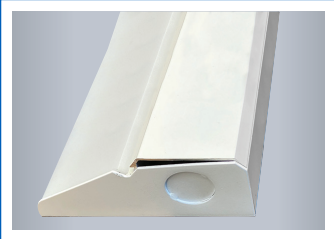

Tools Required:

Wire Stripper, Flat Screw Driver and Philips Screw Driver.
Mounting screws and wire nuts by others.

1

Insert a flat screwdriver between the housing and the snap on cover in order to access the wiring compartment.
(Do not remove any lens cover.)

2

Secure the fixture to the mounting surface using the pre-drilled mounting holes. (Mounting screws by others.)

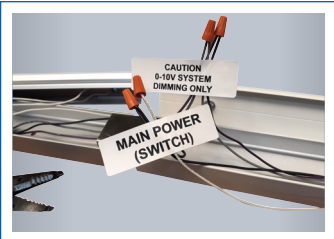

3

Attach approved service conduit using the KO in the end cap. Using a minimum 90°C service conductors, make sure the service voltage is compatible with the LED driver. Refer to the fixture label and the driver for current requirements. Connect purple and gray 0-10V control wires for dimming.

4

For long runs, two or more sections are provided with an integral joiner. Continuous runs are shipped complete with internal "runners" for easy wiring.

5

Snap on cover to complete assembly.
